

Yeast Infections

One common complaint I hear often in the pharmacy is the seemingly constant problem of yeast overgrowth, mostly in women. As antibiotics are prescribed for all the various infections seen at the doctors office, the good bacteria such as acidophyllis are killed along with the bad bacteria and germs. With less beneficial bacteria around, its reduced influence in stimulating the immune system, making serotonin and properly digesting food creates serious problems. Also, yeast can easily gain a strong position in the intestines, the skin and practically anywhere in the body. By taking products such as Floragen which restores the beneficial bacteria, the problem usually goes away. For more information to effectively treat this and other problems, see me (Larry) or visit my website www.larryspharmacies.com.
